

5. APEX indicator

APEX grades trend-pullback setups A / B / C with the stop and two targets drawn, filtered by two higher-timeframe biases, on closed candles only (no repainting). In Pro and Elite, including the R49 week. A charting tool, not signals.

Video: **APEX in 45 seconds: what every label means** · youtube.com/watch?v=c4yAVjXjsX0

1 APEX Web (nothing to install)

On Market Lens press APEX on the chart: graded arrows on the last 3 setups, D1 / W1 bias shading, the SL / TP lines of the latest open setup and a small dashboard. H1 / H4 / D1 / W1.

APEX on the Market Lens chart.

2 MT5 / MT4: copy your licence key

Settings → Connections → APEX card: copy the licence key. One licence covers up to 3 MetaTrader logins (manage them on /apex).

3 Install and paste the key (F7)

Follow Connect MT5 / MT4: APEX in MQL5\Indicators, the Connector on its own chart, F7 → Inputs → paste the key into LicenseKey. Until then APEX shows "needs your licence".

APEX before the licence is active.

4 Use the TradeRadar template

Right-click the chart → Templates → TradeRadar for the clean candlestick layout. H4 is the default and recommended timeframe (Daily + Weekly bias); M15 is the lowest supported. Setups print on closed candles only, so quiet charts are normal.

5 TradingView (on request)

Leave your TradingView username on the APEX card (or /apex) and press Request. We email you when access is live; then add APEX from Indicators → Invite-only scripts. No licence key needed on TradingView.

Still stuck? Open gettraderadar.com/guide#apex and tap **Ask in chat**, or reply to any TradeRadar email.

Analysis, not advice. You place every trade. Trading leveraged products carries a high risk of losing money. TradeRadar is not a financial services provider and gives no trade recommendations. Online version with videos and search: <https://gettraderadar.com/guide>
